

Checkpoint AU

Natural Language Search

The Natural Language search provides you with the option to enter your search as a question or phrase. Checkpoint will return the most relevant results from your Commentary products that best match the key words you've entered. The Natural Language search is available on the Basic Template which is located on the Research page.

1. Click onto the **Research** link.
2. Check that the Basic template is selected
3. Select the **Natural language** search type
4. For optimal search results, check that the **Browse by** drop-down is set to **Content Type**.
5. Enter your search terms into the Keyword(s) field
Note: These can be in the form of a question or a phrase.
6. Click the **Search** button.

Checkpoint will automatically search your Commentary.

The screenshot displays the Checkpoint AU Research interface. The navigation menu at the top includes 'Research', 'Workflow', 'Tools', and 'Learning'. The 'Research' tab is active, indicated by a blue circle with the number 1. On the left, the 'Search Templates' sidebar shows 'Basic' selected, marked with a blue circle and the number 2. The main search area contains a 'Keyword(s)' input field with the placeholder text 'Enter search queries as a question or phrase' (5) and an orange 'Search' button (6). Below the input field, the 'Search Type' is set to 'Natural Language' (3), and the 'Results Layout' is set to 'Document List'. A 'Browse by' dropdown menu is set to 'Content Type' (4). At the bottom, a list of content types is shown, including 'Commentary', 'Legislation', 'Tax and Related News Services', 'Business News and Alerts', and 'ATO'.

Checkpoint will return the top 100 results that best match the key terms entered, along with keyword variations (i.e. depreciate, depreciating, depreciation).
